

graph\_theory::operator<

graph\_theory::operator==

graph\_theory::edge  
::to\_tuple

```
graph LR; A[graph_theory::operator<] --> C[graph_theory::edge::to_tuple]; B[graph_theory::operator==] --> C;
```

The diagram illustrates a relationship between two operators and a common target. On the left, there are two white rectangular boxes. The top box contains the text 'graph\_theory::operator<' and the bottom box contains 'graph\_theory::operator=='. On the right, there is a gray rectangular box containing the text 'graph\_theory::edge' on the top line and '::to\_tuple' on the bottom line. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box, indicating that both operators are associated with or point to the 'edge::to\_tuple' function.
